

MEASUREMENTS

Today you will focus on some basic measuring and conversion skills.

Open "practice.docx" in order to complete the tasks given in this assignment.

TASK 1 – LENGTH, VOLUME AND MASS

You are presented with 3 columns in the first row; length, volume and mass.

- In each column there are smaller columns and there is one that is blank.
- With the information in the other two columns you are going to have to figure out what is supposed to be in the blank column.
- If you put in the correct information the cell will turn into a different color.

TASK 2 – CONVERSION

Now you are going to go through some conversion skills.

- You have two rows in each type of conversion; there is one that has just numbers in the cell.
- Based on the information in the row to the left of the cell in question, you are going to have to determine the units that the number represents.
 - Ex. 1 meter is equal to 39.37 inches.
- If you input the correct unit, the cell will change color.

CONGRATULATIONS! YOU HAVE FINISHED.
